

ATOMIC[™] LIQUID UNIT DOSE

The Atomic[™] Liquid Unit Dose is a durable, accurate, simple and innovative solution all rolled into one. The small, semi-automatic packing machine produces up to 450 cups per hour, providing consistent seals. This tabletop device provides programmable consistency, making it the efficient and economical solution for hospitals that are looking to upgrade from manual unit dosing liquids. Using the same packaging material as the Euclid Medical Speedy Wet Cadet[®], The Atomic[™] Liquid Unit dose provides tamper-evident sealing.

The process of the Atomic[™] Liquid Unit Dose is significantly less expensive than syringes and will provide a higher volume of storage in ADC's. If a barcode label printer is required, there is the option to include the Vantage[™] Label Printer, featuring the Vantage[™] software, meaning only one drug database is needed.

Key Features

- Verified operation of 450-480 sealed containers an hour
- A semi-automatic operation to ensure consistency
- Manufactured with high-quality production materials
- Built-in thermostat for a precise sealing range
- Automatic actuator for consistent seals, no air required

Specifications

- **Weight:** 25 lbs.
- **Size:** 17" x 17" x 17"
- **Power requirement:** 110 V
- **Display:** LED Temperature display
